

THE HISTORY OF CBD **A BRIEF OVERVIEW**

Decades of cannabis prohibition leads many to assume that the therapeutic benefits of CBD are a recent discovery: however, that's far from the truth. Explore the rich history of CBD research.

1940 - 1942

MAKING HISTORY

In 1940, Robert Cahn identifies the first cannabinoid, CBN. Two years later, Roger Adams makes history by isolating the first cannabinoid, CBD.

1963 - 1964

REVEALING RESEARCH

In 1963, Dr. Raphael Mechoulam's research revealed the stereochemistry of CBD. A year later he discovered the stereochemistry of THC.

1980's

PROVING TREATMENT

During 1980s, Dr. Mechoulam investigated the potential of CBD for treatment of epilepsy, which proved to be very effective.

2003 - 2014

INCREASING AWARENESS

As stigmas changed, people began to share stories about their experience with CBD, which sparked increased awareness and propelled the movement forward.

2018

LEGALIZING HEMP

The US Senate passes the 2018 Agricultural Farm Bill, which declassifies substance, which federally legalized hemp-derived CBD.
